JIMIN BYUN

Game & UX Designer · **designs and builds playable systems**

vejimil@snu.ac.kr
jimin-byun.com · github.com/vejimil
Seoul, South Korea

SUMMARY

Design student working across game mechanics, level flow, and interfaces, and implementing them end to end in HTML/CSS/JavaScript and Phaser. Shipped a live language-learning platform solo, a co-op puzzle game in a two-person team, and two local-multiplayer games tuned through player feedback. All are playable at jimin-byun.com.

PROJECTS

Case studies & playable builds: jimin-byun.com

World of Words · Solo · Language-learning web platform — world-of-words.org

- Planned, designed, and built a vocabulary platform for beginner learners of Japanese, French, and Spanish (up to ~A2), from content structure to frontend.
- Replaced fixed word lists with generated quizzes: randomized items from word sets, JLPT-style questions for Japanese, and natural language pairings (KO–JA, EN–FR, EN–ES).
- Turned review into play by reworking a typing-game format into meaning-recognition mini-games with drag/click input; tuned quiz and game layouts for short mobile sessions.

Triends · Two-person team · Co-op 2D adventure (Phaser) — GameAlfy asset contest

- Shaped the core contrast — an astronaut using tools and a plant companion using light — so progress depends on coordination rather than duplicated actions.
- Designed and implemented the light-puzzle section as a three-stage learning curve: light routing → beam splitting → coordinated play.
- Refined AI-generated sprite drafts frame by frame into readable character and plant animations through manual pixel editing.

Arcade Games · Personal · Local two-player games — Python → JavaScript

- Built one-screen, two-player games for an offline environment and tuned timing, feedback, and balance from direct player reactions.
- Ping-Pong Smash adds a timed smash to Pong for faster, riskier rallies; Space Duel grows a shape-based shooter with pickups and level-based bullet patterns.
- Ported both games to the browser so visitors can play them on the portfolio.

LEADERSHIP & ACTIVITIES

SNU Graduation Fashion Show · Planning Team Lead · Designer

- Joined before learning garment construction; completed three original looks and became planning team lead.
- Secured funding and sponsorship and led planning from concept to show day.

SKYST Conference · Marketing Team Lead

- Led outreach for the first edition of a student-run computing conference across SNU, Yonsei, Korea University, and KAIST.

SNU Festival Planning Group (Chukjehaneun Saramdeul) · Event Team

- Designed low-budget mini-games and participatory events, including human curling with wheeled tubs and on-site safety planning.

School of Transdisciplinary Innovations · Student Supporters Mentor

- Mentored students in a newly established SNU program; founded its band club, recruited 40+ members, and led it to a live performance.

SNU Buddy · Team Leader

- Led a group of about 50 exchange students from multiple countries through the semester, coordinating across cultures.

Also · SNU Computer Club, Executive Board · University Band, Violinist

EDUCATION

Seoul National University · B.A. Candidate — Expected 2029

- Aesthetics; Fashion and Textiles; coursework in Industrial Design.

SKILLS

Design	Game & level design, UX/UI, pixel art & animation, playtesting and iteration
Build	HTML, CSS, JavaScript, Phaser, Python
